

<p>This section provides a brief summary of the study. It is important for you to understand why the research is being done and what it will involve before you decide. Please take the time to read the entire consent form carefully and talk to a member of the research team before making your decision. You should not sign this form if you have any questions that have not been answered.</p>	
It's Your Choice	<p>This is a research study. Being in this research study is your choice; you do not have to participate. If you decide to join, you can still stop at any time. You should only participate if you want to do so. You will not lose any services, benefits or rights you would normally have if you choose not to take part.</p>
Research Purpose	<p>This research study is being conducted to learn the safety and tolerability of the drug-x when used in combination with chemotherapy for patients with advanced solid tumor cancer. The information we learn will help us determine the safest, most effective dose of the drug. We will also be observing what the drug does to the body and what the body does with the drug. Drug-x is an investigational drug and is not approved by the FDA.</p>
What's Involved	<p>To see if you can be in the study, a number of screening tests and procedures are required. If eligible and as long as you are benefitting from the treatment, you could be in this study anywhere from 3 months to 18 months.</p> <p>All participants in this study will receive drug-x and chemotherapy on an outpatient basis and will be asked to keep a medication diary. Study participation includes blood and urine tests, electrocardiograms, oral drug-x and chemotherapy by IV infusion. The study includes an optional biopsy. Follow-up safety evaluations will occur after the last dose of the investigational drug.</p>
Key Information	<p>There are risks to the study drug and chemotherapy that are described later in this document. Some risks include nausea, diarrhea, low white and red blood cell counts, being tired and weak, fever, muscle pain, reproductive risks and radiation risks from CT scans and tumor biopsies. It is important to review the risk section carefully.</p> <p>Many of the costs related to participation will be paid for by the research study, but there may be some costs to you. The study will reimburse limited expenses for your travel, like mileage and parking. If you are injured because of study participation, we will help you get treatment; however, the costs for this care will be billed to you or your insurance.</p> <p>It is not known whether this treatment will be better or worse for you than what your doctor would normally choose. By participating in this research study, you may help doctors answer this question.</p> <p>This study is not the only option you have for treatment of your cancer.</p>

	<p>If you decide not to take part in this study, you will still be able to receive medical care. The research team will discuss other treatment options with you.</p>
Learn More	<p>If you are interested in learning more about this study, read the rest of this form carefully. The information in this form will help you decide if you want to participate in this research or not. A member of our research team will talk with you about taking part in this study before you sign this form. If you have questions at any time, please ask us.</p>
