

# What Does it Take to Reuse Research Open Data?

Irene Pasquetto - PhD Candidate

**UCLA** Center for Knowledge Infrastructures

# Long tail of data reuse

# CHALLENGES for DATA REUSE

- Lack of standardized data curation practices.
- Lack of quality in the data.
- Differences in skills and expertise.
- Problems with data “relevance” and approximation of results.

=

**Lack of trust in others' data**

# FEW DISCUSSION POINTS

- Are open repositories always the appropriate solution? (vs. “upon request” sharing?)
- Should be the “raw” data made available before publication?
- How are investments for data sharing different from investments for data reuse?
- Shouldn't be the negative results published as well?
